

No Late Submissions Accepted for This Assignment

Final Project

Course	Software Development Case Studies
Format	YouTube video (Unlisted) + delivery report
Team Size	Maximum 2 students
Video	Max 8 minutes · Demo (3–5 min) then Presentation (2–3 min)
Written Report	2–3 pages, 6 sections
Weighting	Video 50%, Report 50%

Part 1 - Video Submission (50%)

Submit one YouTube video set to Unlisted. Eight minutes maximum. Demo runs first; presentation follows in the same recording.

Segment	What to show	Time
Demo	Walk through every user story from Assignment 1, in order. Announce each story by ID and title before demonstrating it. Show the trigger, the action, and the outcome using real input and real output. Stories that were descoped or not completed must be named and acknowledged - not omitted.	3–5 min
Presentation	Cover four points: what you built and for whom; one decision you stand behind and one you would reverse; whether the MVP hypothesis held and what evidence supports that judgment; one concrete next step.	2–3 min

Evaluators will follow the video against the user story list from Assignment 1. Stories demonstrated without being named, or stories silently skipped, will be treated as unimplemented.

Set visibility to Unlisted before submitting - Private links will not be assessed. Both team members must appear on camera and speak. Audio must be intelligible throughout; test it before uploading.

Part 2 - Delivery Report (50%)

2–3 pages, six sections. Each section answers a specific question. Do not add background, motivation, or theory beyond what is explicitly requested.

Section 1 - Product Summary · ungraded

Three sentences: the product name, the problem it addresses, and the primary user.

No Late Submissions Accepted for This Assignment

Section 2 - Requirements Delivery (10%)

Carry forward every FR and NFR from the Assignment 1 traceability table. Record the final status for each requirement and attach evidence where the status is Implemented or Partial.

ID	Requirement	Type	Final Status	Evidence / Note	Sprint
FR-01	From Assignment 1	Functional	Implemented		
FR-02	From Assignment 1	Functional	Partial		
FR-03	From Assignment 1	Functional	Descoped		
NFR-01	From Assignment 1	Non-functional	Implemented		

Status	Meaning
Implemented	Complete and testable. Include a commit link or demo timestamp as evidence.
Partial	Core behavior works; edge cases or non-functional criteria are not met. State what is missing.
Descoped	Removed from scope. State the reason and whether it affects the MVP hypothesis.

Follow the table with one paragraph stating how many requirements were fully implemented, partially implemented, and descoped - and what the unmet requirements mean for the delivered product.

Section 3 - MVP Hypothesis Outcome (10%)

Restate the original hypothesis from Assignment 4 verbatim, then complete each row of the table.

Question	Your Answer
State the original hypothesis (from Assignment 4)	
What evidence supports it?	Link to <u>user feedback (not your friends and family)</u> , usage data, or observable behavior.
What did not validate?	Be specific. Vague answers score zero.
What changed as a result?	A decision, a descoped feature, or a pivot - with a reason.

Imprecise answers score zero. "Users found it useful" is not evidence. A verbatim user quote, a usage metric, or a documented behavioral observation is.

Section 4 - Development Process (10%)

Demonstrate that the product was developed incrementally across the course, not assembled in a single push before submission. Complete the table and include a direct link to your evidence.

No Late Submissions Accepted for This Assignment

Item	What to include
Methodology	Name the methodology chosen in Assignment 2. One sentence on how it was applied in practice.
Github	• Commit timeline (with dates visible) • At least 2 commits opened to show real changes (diffs) • Must show work across multiple points in time - not a single final commit.
Ceremonies/artefacts	If Scrum: which ceremonies ran (sprint planning, review, retro)? Which did not, and why? If another method: equivalent evidence of cadence.
What you learned	One concrete thing the methodology helped with. One thing you would do differently.

*Required: a link to your commit history or sprint board. A single commit dated the day before submission does not satisfy this section. Include **screenshots**.*

Section 5 - Theory in Practice (10%)

Identify one concept from the assigned course reading that is directly visible in a decision or problem you encountered during development. Cite the source by author, title, and page or chapter.

Item	Required content
Concept	Name one concept from the course reading (author, title, page or chapter). Be very specific. Something not obvious.
Where it appeared	A specific moment in your project - a decision, a problem, a trade-off. Not a general claim.
Outcome	Did applying it help? If you failed to apply it, what was the cost?

General claims - "we followed agile principles", "we applied software engineering best practices" - score zero. The concept must be named, the source cited, and a specific project moment described.

Section 6 - Architecture Delta (10%)

Document only the components or decisions that diverged from the original design submitted in earlier assignments. If the implementation matches the original design exactly, state that in one sentence.

Component / Decision	Original Design	Final Implementation
e.g. Database	PostgreSQL	Switched to SQLite - add reason
e.g. Auth approach	Session-based	JWT - add reason
Add row if changed...		

Do not reproduce or summarise the original architecture. This section records divergence only - what changed, and why.

Grading Rubric

Area	%	Exemplary	Satisfactory	Needs Improvement
VIDEO (50%)				
Demo	30%	The product must be a fully functional MVP: all A1 user stories are demonstrated in order using real input/output; the system runs live (locally or deployed) with stable end-to-end functionality; any skipped stories are explicitly stated.	The product is mostly functional: most user stories are demonstrated, but some are incomplete or unclear; the system runs with minor bugs or instability; the demo may partially rely on screenshots or pre-recorded outputs.	The product is non-functional or incomplete: user stories are not properly followed; the system does not run or only partially works; the demo relies mainly on screenshots with no clear evidence of a working system.
Presentation	15%	Hypothesis outcome stated. Decisions justified. Both members speak.	Hypothesis, outcome and decisions are mentioned but not substantiated.	Hypothesis absent. No decisions explained.
Video quality	5%	Both faces visible. Audio clear. Max 8 min respected.	Minor issue with audio clarity or camera framing.	One or both members not on camera, or audio is not intelligible.
REPORT (50%)				
Requirements delivery	10%	Every FR/NFR from A1 is listed. Status and evidence for each. Descoped items explained.	Most requirements listed. Some evidence is missing.	Requirements not mapped. Statuses absent.
MVP hypothesis	10%	Hypothesis restated. Each answer is specific and grounded in observable evidence.	Hypothesis stated; outcome described without supporting evidence.	Hypothesis absent. Outcome section not completed.
Development process	10%	Linked evidence demonstrates work distributed across sprints. Methodology	Partial evidence of iteration. Reflection lacks specificity.	Evidence absent or confined to a single late commit.

No Late Submissions Accepted for This Assignment

		reflection is honest and specific.		
Theory in practice	10%	Concept named and sourced. A specific project moment is described and its outcome assessed.	Concept identified but its application in the project is not demonstrated.	No source cited, or discussion is entirely abstract with no connection to the project.
Architecture delta	10%	Only divergences recorded. Each is accompanied by a clear rationale.	Changes identified but not justified.	Reproduces the original design, or architectural divergences are absent.

Submission Checklist

☐	YouTube link - set to Unlisted. Confirmed accessible without a Google account.
☐	Video does not exceed 8 minutes. The demo precedes the presentation in the same recording.
☐	Both team members appear on camera and speak on camera.
☐	Audio tested before upload. Speech is intelligible throughout.
☐	Working product submitted - deployed link, repository, or runnable file. Tested on the submission day.
☐	README with setup instructions.
☐	Delivery report (4–6 pages) with all six sections complete.
☐	The requirements table carries over all FRs and NFRs from Assignment 1. Each has a final status and, where applicable, evidence.
☐	The commit history or sprint board is linked. Work is distributed across the course timeline - not concentrated in a single push.
☐	Theory in Practice section: one concept named, one source cited by author and title, one specific project moment described.

Academic Integrity Requirement

All written submissions will be checked using an anti-plagiarism system. Any detected use of AI-generated content or unattributed sources (including paraphrasing without proper citation) will result in the work being assigned a grade of **0 (Fail)**.

Any use of AI tools is permitted **only for learning purposes** and must be **clearly documented and properly disclosed**.
